Q1(c) Primal function: the inner maximisation builds an infinite wall on the infeasible side
$g(x) = \max_{\mu \geq 0} L(\mu, x)$
$M = 5$
$M = 15$
$M = 2$
$g(x) = +\infty$
$g(x) = x^2$
infeasible $x < 1$
$\min_x g(x) = 1$ at $x = 1$
