Q2(a)(iv) Two slices through the saddle point $(x^\star, \mu^\star) = (1, 2)$; both pass through the value 1
flat in μ: left inequality holds with equality
minimised at $x^\star = 1$: right inequality holds
$L(\mu, x^\star) = 1 + \mu \cdot 0 = 1$
$L(\mu^\star, x^\star) = 1$
$L(\mu, x^\star)$
μ
$L(\mu^\star, x) = (x-1)^2 + 1$
$L(\mu^\star, x^\star) = 1$
$L(\mu^\star, x)$
x
